Dataset Used	Methodology Used	Limitation of the Paper
NSL-KDD	Random Forest	Uses an older benchmark dataset
KDD99	Binary PSO + Random Forest	Uses an old dataset
NSL-KDD	SVM, Random Forest, Extreme Learning Machine	Performance depends on the selected dataset and features
KDD99, NSL-KDD	Deep Neural Network	Mainly uses older benchmark datasets
KDD99	Recurrent Neural Network	Requires more computational resources
KDD99	Deep Belief Network, Restricted Boltzmann Machine	Uses an older dataset
KDD99	Deep Learning, Convolutional Autoencoder	Deep model is complex and time-consuming to train
Network Flow Data	Deep Hierarchical Network	Requires high computational resources
KDD99, NSL-KDD, CIC-IDS2017, CIC-IDS2018	Feedforward Neural Network, Autoencoder, DBN, LSTM	Comparison mainly depends on benchmark datasets
UNSW-NB15	Random Forest, Decision Tree, Logistic Regression, KNN, ANN, SMOTE	Class imbalance remains a challenge
NSL-KDD	Deep Neural Network, Real-Time Feature Extraction	Real-time implementation is complex
UNSW-NB15	Dataset Generation and Analysis	Benchmark dataset may not represent every real-world network

UNSW-NB15, KDD99	Statistical Analysis	Dataset comparison rather than a complete IDS
Multiple IDS Datasets	Dataset Survey and Comparison	Does not develop a new detection model
Multiple Datasets	Machine Learning, Deep Learning	Review paper; does not propose one new model
CSE-CIC-IDS2018, Bot-IoT	DNN, RNN, CNN, Random Forest	Different datasets make direct comparison difficult
NSL-KDD	Decision Tree, KNN, DNN, Random Forest, Deep Stacking	Model becomes more complex
UNSW-NB15	Random Forest, Extra Trees, AdaBoost, XGBoost	Focuses mainly on ensemble methods
UNSW-NB15	Feature Selection, Machine Learning, SMOTE	Class imbalance affects performance
UNSW-NB15	Two Random Forest Models, Soft Voting	Practical online implementation was not evaluated
UNSW-NB15, NSL-KDD	Feedforward Neural Network	Uses only a small selected feature set
UNSW-NB15	LSTM, Attention Mechanism	Deep learning requires more resources
NSL-KDD	Random Forest, XGBoost, DNN, SMOTE	Mainly evaluated using NSL-KDD
UNSW-NB15	Deep Learning, Extra Trees	Generalization to other datasets needs further study

NSL-KDD	CNN, LSTM	Hybrid deep learning models can be computationally expensive
